Chen

TEAM GOAL

TEAM GOAL

- Aesthetically Appealing
 - Sleek design - Material color choices and utilized cylindrical arms to hide wiring and electronics
- Strong performance and agility
 - Use motors to generate powerful thrust
- Land safely
 - Utilized TPA material for legs that is flexible, durable, and impact-resistant
- Fly accurately to toast a marshmallow
 -

OUR DESIGN

- Quadcopter with an attached flamethrower
 - Utilize four motors
 - Arm in the front of the drone that has the servo motor to engage/disengage the flamethrower
- Cylindrical arms
 - Reduce weight and harness the wires/electronics through the arm to make it aesthetically appealing
- Arms, motor mounts, flamethrower mount - 3D printed PLA material
- Drone top/bottom plates - Acrylic
- Landing gear (legs) - TPA material

BILL OF MATERIALS

- Battery
- Batter straps
- Dampeners
- Motors
- Propellers
- ESCs
- Servo Motor
- Wifi module
- Flight Controller
- Power module
- Radio Controller
- Flamethrower (HackSmith Mini-Saber)
